1. Orthophoto imagery was created using aerial photography taken February 2010. The unprocessed imagery contains some degree of error in geometry (geometric distortion) and in the measured brightness of the pixels (radiometric distortion). Image rectification and restoration algorithms are applied during image processing to reduce the distortions and degradations that result from the original image acquisition. However, not all of the potential distortions and/or degradations will be corrected during this process. Therefore, exact interpretation of the map image features will require field verification by the map user.
